

fx0_fixedParameters

fsx0_fixedParameters

getReinitializeFixedParameter
InitialStates

```
graph LR; A[fx0_fixedParameters] --> C[getReinitializeFixedParameter InitialStates]; B[fsx0_fixedParameters] --> C;
```

The diagram illustrates a process flow where two input parameters, 'fx0_fixedParameters' and 'fsx0_fixedParameters', are used to calculate 'getReinitializeFixedParameter InitialStates'. The inputs are represented by white rectangular boxes on the left, and the output is a larger gray rectangular box on the right. Two blue arrows point from each input box to the output box, indicating that both inputs are required for the calculation.
